

**SOP**

LaQshya Standard  
Operating Procedures  
for District Hospitals

**Ministry of Health and Family Welfare  
Maternal Health Division  
2018**

## PROGRAMME OFFICER'S MESSAGE

---

The primary aim of LaQshya programme is to improve quality of care around birth and reduce maternal mortality and morbidity, neonatal mortality and still births. The interventions targeted specifically for labour rooms (LR) and maternity operation theatres (OT) under the programme, focus on strengthening of LR and OT.

In order to standardize and streamline our efforts to strengthen the LR and OT particularly of the District Hospitals, *LaQshya Standard Operating Procedures for District Hospitals* has been prepared. The SOP seeks to inform and assist health personnel at the district hospitals in providing safe intrapartum services to pregnant women.

Child birth is a complex process, and it is essential to provide everything that is needed to ensure both the mother and new born child receive the safest care possible. The Standard Operating Procedures (SOP) and Checklists provided in this document are useful tools to organize such complex, and important processes and help deliver better and safer care in a variety of settings.

The SOP describes steps that the health personnel should follow in the labour rooms, OT, Central Sterile Supply Department. The SOP also describes at length the points to be considered to ensure respectful maternity care is provided at all levels to the pregnant women at the district hospitals.

Although the focus is largely on clinical procedures like pre-operative mechanisms, intrapartum procedures, etc., the SOP gives equal importance to the methods and procedures for ensuring respectful maternity care.

The WHO Safe Childbirth Checklist included in this document is an organized list of evidence-based essential birth practices and targets the major causes of maternal deaths, intrapartum-related stillbirths and neonatal deaths it would complement the SOP and ensure that quality care is provided to women giving birth at the health facilities.

Since the intrapartum processes are complex and dynamic, the users of the SOPs are encouraged to share the lessons learned during the application of the procedures for possible incorporation into future revisions of the document. While the SOP reflects usual practice, there will be circumstances from time to time that may require an adaptive response based on the professional judgement of the health personnel and decision makers.

Lastly, the technical contribution made by Dr. Archana Verma, General Manager, Quality Assurance Division, NHM, Uttar Pradesh and her team in forming up this document is huge and is duly acknowledged by the Maternal Health Division.

It is anticipated that the States and UTs find the *LaQshya Standard Operating Procedures for District Hospitals* valuable in strengthening services at the district hospitals and in providing safe and quality maternity care.

## SOPs: LABOUR ROOM

---

### OBJECTIVES

- Improve Quality of care during the delivery and immediate post-partum period.
- Effectively manage obstetric and neonatal complications & high-risk pregnancies.
- Provide Respectful Maternity Care (RMC) to all pregnant women coming to the facility.
- Stabilization of complications and ensure timely and referrals to an appropriate facility and enable an effective two way follow-up system.
- Enhance satisfaction of beneficiaries visiting the health facilities.
- Ensure 100% compliance to administration of Oxytocin after birth & use of real time partograph during delivery.
- Ensure 100% compliance to infection prevention practices.
- Ensure zero stock out of necessary drugs and consumables.

#### **Purpose:**

To develop a system for ensuring care of pregnant women from antenatal to postnatal period and also address the needs of the new born. It includes a comprehensive approach to reduce maternal, neonatal, infant and less than 5 mortality and protect them from likely health risks they may face.

#### **Scope:**

It covers pregnant woman during the period, from day of her registration for first ANC to 42 days post-delivery & care of newborn. This includes the referral services as well.

#### **Responsibility:**

In-charge of hospital, Service Provider in OBG Department, Paediatrician, Medical officer and staff nurse /ANM

#### **Standard Procedures:**

SOP for receiving and assessment of the patient of delivery, SOP for Intra partum care

|  | <p><b>The neonatal period</b> begins with birth and ends on 28 days after birth. Neonatal deaths may be subdivided into early neonatal deaths, occurring during the first seven days of life (0-6 days), and late neonatal deaths, occurring after the seventh day but before the 28th day of life (7-27 days).</p> <p>A decrease or cessation in sensations of fetal activity may be an indication of fetal distress or death, though it is not entirely uncommon for a healthy foetus to exhibit such changes, particularly near the end of a pregnancy when there is considerably less space in the uterus than earlier in pregnancy for the foetus to move about.</p> <p>Still, medical examination, including a non-stress test, is recommended in the event of any type of any change in the strength or frequency of fetal movement, especially a complete cease; most midwives and obstetricians recommend the use of a kick chart to assist in detecting any changes.</p> <p>Foetal distress or death can be confirmed or ruled out via foetoscopy / doptone, ultrasound, and/or electronic fetal monitoring. If the foetus is alive but inactive, extra attention will be given to the placenta and umbilical cord during ultrasound examination to ensure that there is no compromise of oxygen and nutrient delivery.</p> <p>The World Health Organization recommends that any baby born without signs of life at greater than or equal to 28 completed weeks' gestation be classified as a stillbirth.</p> <p><b>Causes of still birth:</b></p> <ul style="list-style-type: none"> <li>• Problems with the placenta, which nourishes the baby, can lead to a stillbirth in around two thirds of cases. In a placental abruption, the placenta separates too soon from the uterine wall.</li> </ul> <p><b>Other causes of stillbirth include:</b></p> <ul style="list-style-type: none"> <li>• Umbilical cord problems also cause stillbirths. In a prolapsed umbilical cord, the cord comes out of the vagina before the baby, blocking the oxygen supply before the baby can breathe on its own.</li> <li>• A PW's medical condition that existed before or developed during the pregnancy can lead to stillbirth. Women are at increased risk if they have type 1 diabetes or untreated diabetes before or during pregnancy. High blood pressure - particularly pregnancy -induced high blood</li> </ul> |  |  |

| 16.2 | <p><b>Quality Assurance of Referral Services:</b></p> <p>Each woman who is referred to the district hospital is given a standard referral slip. This referral slip is sent back to the referring facility with the woman or the person who brought her after writing outcome of referral on it.</p> <p>Both the district hospital and the referring facility keep a record of all referrals as a quality assurance mechanism</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | Medical Superintendent |                        |

## ENSURING RESPECTFUL MATERNITY CARE

---

### Points to remember and implement

- Ensure privacy of the woman in labour
- Avoid Performing harmful practices
- Provide complete information about the care provided to the patient
- Take informed consent
- Allow choice of position for birth
- Avoid Verbal abuse (insult, intimidation, threats, coercion)
- Provide choice of companion
- Provide continuous support during delivery and avoid abandonment of care (i.e. leaving the woman alone or unattended)
- Ensure confidentiality of the patient
- Allow drink and food during labor
- Provide liberty of movement during labor(e.g., walking, moving around)
- Avoid discrimination based on ethnicity, race, or economic status, including denial of admission due to illegal immigration status
- Keep PW and baby together 24 hours a day. Avoid unnecessary separation of PW and newborn after the birth
- Prevention of institutional violence against women and babies, including disrespectful. Avoid Physical abuse (slapping/hitting)
- Depriving the woman of services in the facility due to lack of payment demanded for it
- Avoidance of the overuse of drugs and technology (such as oxytocin augmentation, episiotomy, cesarean section, incubation, sonograms)
- Skin- to-skin contact of the newborn with the PW immediately after the birth for at least the first hour
- Promoting breastfeeding on demand
- Evidence based care that enhances & optimizes the normal processes of pregnancy, birth, and postpartum
- Other

## OTHER

Incorporating training on the issue of labour and childbirth companionship, and on the importance of respecting women's autonomy in making decisions during labour and childbirth, into pre- and in-service training for health-care providers and hospital quality managers could be one effective route towards achieving and sustaining this change.

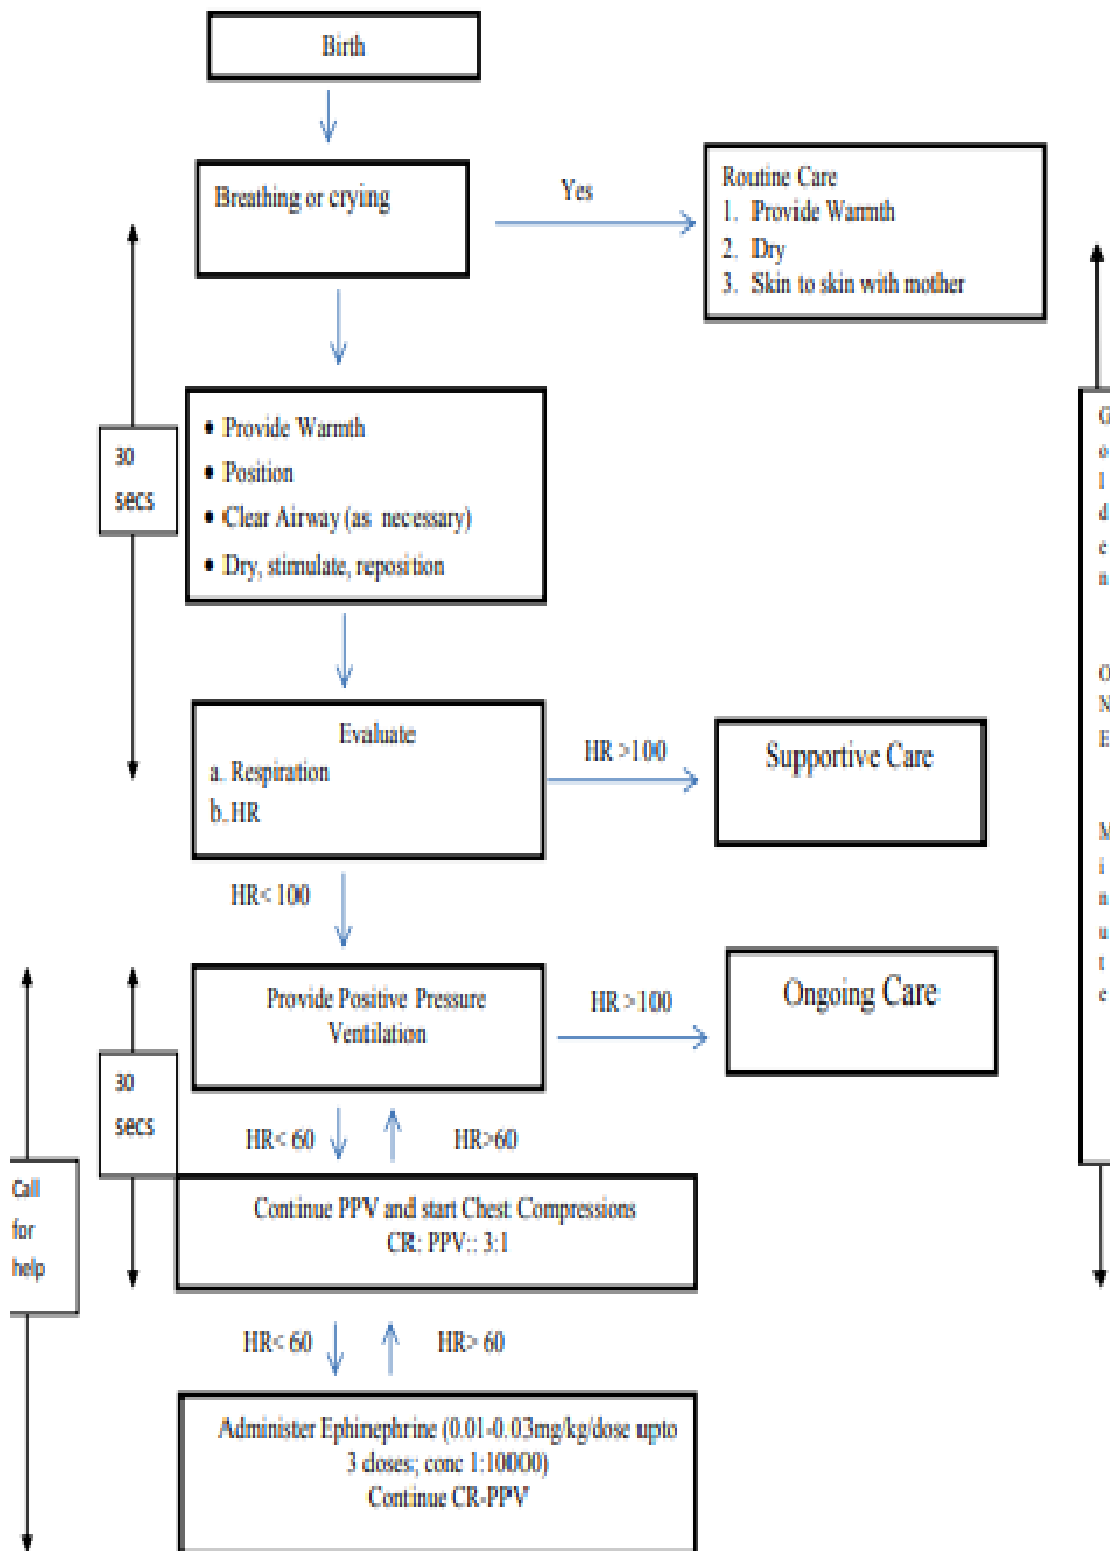

For implementation to be successful, it is crucial that health-care providers understand the benefits and potential caveats of labour companionship, as well as the importance of supporting pregnant women to decide whether they want a labour and childbirth companion, whom to choose and what role they want the companion to play on their behalf. A participatory approach is key to introducing labour companionship policies at the health-care facility.

Sensitization in communities and with women in particular is another important component of an implementation strategy for labour companionship, which will ensure that women are aware of their rights to select and have a companion and to make decisions related to their care during labour and childbirth.

- Provision of residence for PWs; active participation of parents in the care of hospitalized newborns; Parent training in newborn care; Siblings and grandparents visits;
- Hospital-based training in neonatal CPR;
- Prevention of excessive coercion—women being forced to undergo medical procedures.

A programme to allow women the support of a companion of choice during labour and childbirth can be implemented as a low-cost and effective intervention to improve the quality of care and ensure respectful maternity care.

# Neonatal Resuscitation Program

\* Endo-Tracheal Intubation can be considered at any level  
 \*\*Consider stopping NNR if no detectable HR for 10 mins

## SOPs: OT/ CSSD/THEATRE STERILE SUPPLY UNIT

---

### OBJECTIVES

- To provide skilled and efficient administration of anaesthesia for elective & emergency operation throughout the year.
- Training of all Doctors, OT Nurse & OT Sister.
- Safe & effective Sterilization & Fogging Procedure (using H<sub>2</sub>O<sub>2</sub>)
- Improving coordination among the surgeons & the surgical team
- Having control on the stock available in the OT, by assigning the work to different people & verifying them in regular intervals.
- Standardization of surgeries done in the Operation Theatre, specialty wise along with the surgery code.
- Streamlining of various processes related to implant Procurement, Billing & Consumables.

### Purpose:

To provide guideline/ instructions for Processes Related to Operation Theatre Functioning with the aims that:

- Needs and expectations of patients are established
- Patient satisfaction is enhanced on continual basis, and
- Feedback loop is established for continuous improvements.

### Scope:

It covers the total functioning of the Operation Theatre with relation to the patient and other OT specific processes

### Responsibilities:

#### *Operation Theatre In charge:*

- To schedule surgeries as per priorities and seriousness of cases.
- To ensure maintenance of OT and environmental cleanliness practices mentioned in the Infection Control and Hygiene procedures.
- To formulate the OT protocols and procedures.
- To support Nurse In-charge of OT for routine supervision of above mentioned issues.

#### *OT Nurse / Assistant:*

- To prepare a final list of the planned surgeries in consultation with the HOD for the next day.

- To ensure that all the instruments / linen are autoclaved / sterilized.
- To perform routine Check & proper functioning of equipment with the help of Checklist.
- To ensure that infected cases are taken at the end of the list of surgeries for the OT
- To ensure that OT is fumigated; instruments / equipment are disinfected and cleaned when infected cases are operated.

*Staff Nurses:*

- To receive & hand over the patient along with case file, diagnostic reports duly filled and signed by concerned doctor.
- To facilitate the patients in filling the consent form with full signature, date and time.
- To prepare the patient for operation (ensuring site shaving, antiseptic application and draping of the site).
- To set up the OT table for specific operation or IUCD insertion with required instruments / linen / equipment.
- To assist the gynaecologist / surgeon during the entire process of operation/insertion
- To ensure the availability of cross-matched whole blood units before the commencement of operation and same is recorded.

*Sweeper:*

- To clean / Scrub the OT, minor OT, recovery room and associated area as per procedure specifications provided according to Infection control programme.
- To collect waste and hand it over to the Biomedical Waste collection personnel.
- To assist OT I/C & Staff Nurse in Fumigation / Sterilization / Autoclaving inside PPU including OT, minor OT etc.

**Standard Procedures: SOP for CSSD/ OT**

| S.NO.                                 | ACTIVITY                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | RESPONSIBILITY                                         | REFERENCE DOCUMENT / RECORD |

| <b>Schedule of Surgery</b>            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                        |                             |
| 1.1                                   | The surgeon informs the OT nurse through an OT Call Register for OT booking. This slip includes the date and type of surgery to be performed.                                                                                                                                                                                                                                                                                                                                  |                                                        | OT call register            |
| 1.2                                   | The OT Nurse records the request in the OT Booking Register. In case of any clash in schedule or non-availability, he informs the concerned surgeon.                                                                                                                                                                                                                                                                                                                           |                                                        | OT booking register         |
| 1.3                                   | She forwards the details of the OT bookings to the OT In charge and Anaesthetist.                                                                                                                                                                                                                                                                                                                                                                                              |                                                        |                             |
| 1.4                                   | OT list is finalized the day before surgery at 3:00 PM by the OT Nurse and the same is approved by OT in-charge & displayed on the notice board of the theatre.                                                                                                                                                                                                                                                                                                                |                                                        | Operating list              |
| 1.5                                   | Emergency cases are accorded priority by the OT in-charge of Operation Theatre. This may require rescheduling of planned surgeries which is intimated to the concerned authorities.                                                                                                                                                                                                                                                                                            |                                                        |                             |
| <b>Preparation for surgery</b>        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |                                                        |                             |
| 2.1                                   | Sterilized instruments and linen are collected and arranged in respective OTs from TSSU, on the previous night                                                                                                                                                                                                                                                                                                                                                                 | Night OT Nurse                                         |                             |
| 2.2                                   | All OTs checked for readiness for surgery                                                                                                                                                                                                                                                                                                                                                                                                                                      | Chief OT Nurse                                         |                             |

### Format for Maintaining Records (For Fogging)

For each area OT:

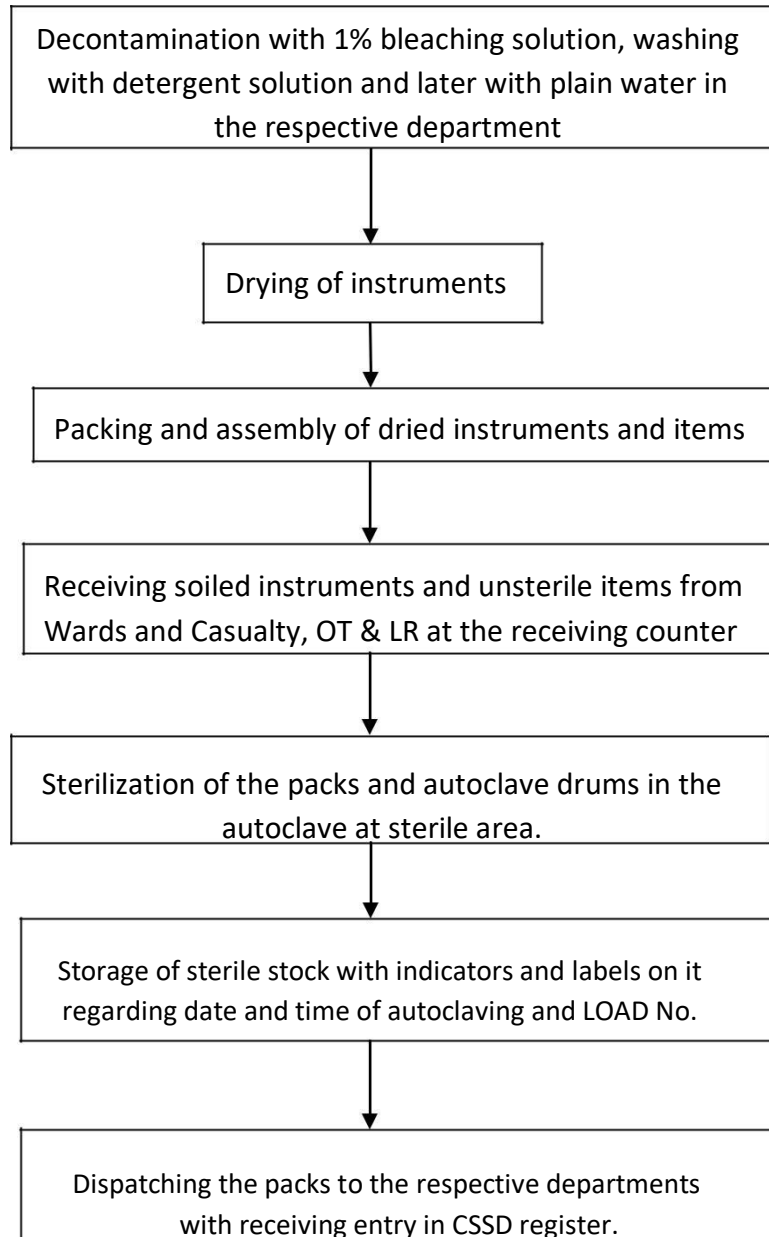

| Date | Time of A/C Off | Time of Start | Time of opening | Agent used | Time when sealed | Cleaning | Cultures Taken | Time of re-commissioning area | Sign of. In-charge |
|------|-----------------|---------------|-----------------|------------|------------------|----------|----------------|-------------------------------|--------------------|
|      |                 |               |                 |            |                  |          |                |                               |                    |
|      |                 |               |                 |            |                  |          |                |                               |                    |
|      |                 |               |                 |            |                  |          |                |                               |                    |

If carbolization is done in any theatre, the O.T Nurse ensures that there is proper time gap between the two operations for removing the used material, cleaning and Bacillocid spray.

### Process Efficiency Criteria:

| S.N. | ACTIVITY          | PROCESS EFFICIENCY CRITERIA  | BENCHMARK/<br>STANDARD/ TARGET |
|------|-------------------|------------------------------|--------------------------------|
| 1    | Infection Control | Surgical Site Infection rate |                                |
| 2    | Schedule          | Surgery Cancellation Rate    |                                |
| 3    | Utilization       | OT Utilization Rate          |                                |
| 4    | Outcome           | Major Surgeries per doctor   |                                |

### Work Flow Chart- CSSD

# Before Birth : SAFE CHILDBIRTH CHECKLIST

## CHECK-1 On Admission

### Does Mother need referral?

- Yes, organized  
 No

Refer to FRU/Higher centre if any of following danger signs are present, mention reason and given treatment on transfer note:

- Vaginal bleeding  Severe abdominal pain  
 High fever  History of heart disease or other major illnesses  
 Severe headache or blurred vision  Difficulty in breathing  Convulsions

### Partograph started?

- Yes  
 No: will start when  $\geq 4$  cm

Start when cervix  $\geq 4$  cm, then cervix should dilate  $\geq 1$  cm/hr

- Every 30 min: Plot maternal pulse, contractions, FHR and colour of amniotic fluid
- Every 4 hours: Plot temperature, blood pressure, and cervical dilation in cm

**NO OXYTOCIN/ other uterotonics for unnecessary induction/ augmentation of labor**

### Does Mother need

- Antibiotics?  
 Yes, given  
 No

Give antibiotics to Mother if:

- Mother's temperature  $\geq 38^{\circ}\text{C}$  ( $\geq 100.5^{\circ}\text{F}$ )  
 Foul-smelling vaginal discharge  
 Rupture of membranes  $>12$  hrs without labour or  $>18$  hrs with labour  
 Labour  $>24$  hrs or obstructed labour  
 Rupture of membranes  $<37$  wks gestation

### • Inj. Magnesium Sulfate?

- Yes, given  
 No

Give first dose of inj. magnesium sulfate and refer immediately to FRU/Higher center OR give full dose (loading and then maintenance) if at FRU if:

Mother has systolic BP  $\geq 160$  or diastolic  $\geq 110$  with  $\geq 3$  proteinuria **OR** BP systolic  $\geq 140$  or diastolic  $\geq 90$  with proteinuria trace to  $+2$  along with any of:

- Presence of any symptom like:
- Severe headache
  - Blurring of vision
  - Difficulty in breathing
  - Pain in upper abdomen
  - Oligouria (passing  $<400$  ml urine in 24 hrs)
- Convulsions

### Corticosteroid

- Yes, given  
 No

Give corticosteroids in antenatal period (between 24 to 34 weeks) to mothers if:

- True pre-term labour  
 Conditions that lead to imminent delivery like APH, Preterm Premature ROM, Severe PE/E Dose: Inj. Dexamethasone 6 mg IM 12 hourly - total 4 doses

### HIV status of the mother:

- Positive  
 Negative

If HIV+ and in labour:

- If mother is on ART, continue same  
 If not on ART, start ART  
 If ART is not available, refer immediately after delivery to ICTC/ART Centre/Link ART Centre for further HIV management

### Follow Universal Precautions

If HIV status unknown:

- Recommend HIV testing

**Encouraged a birth companion to be present during labour, at birth and till discharge**  Yes  No

### Are soap, water, gloves available?

- Yes, I will wash hands and wear gloves for each vaginal exam  
 No, supplies arranged

### Confirm if mother or companion will call for help during labour if needed

Explain to call for help if there is:

- Bleeding
- Severe abdominal pain
- Difficulty in breathing
- Severe headache or blurring vision
- Urge to push
- Can't empty bladder every 2 hours

Counsel Mother and Birth Companion on:

- Support to cope up with labour pains
- No bath/oil for baby
- No Pre-Lacteal feed
- Initiate breastfeeding in half-an-hour
- Clothe and wrap the baby

Name of Provider: ..... Date: ..... Signature: .....

# Just Before and During Birth : SAFE CHILDBIRTH CHECKLIST

## CHECK-2 Just Before and During Birth (or C-Section)

### Does Mother need:

• *Antibiotics?*

- Yes, given  
 No

Give antibiotics to Mother if any of the following are present:

- Mother's temperature  $\geq 38^{\circ}\text{C}$  or  $\geq 100.5^{\circ}\text{F}$   
 Foul-smelling vaginal discharge  
 Rupture of membranes  $>18$  hrs with labour  
 Labour  $>24$  hrs or obstructed labor now  
 Cesarean section

• *Inj. Magnesium sulfate?*  Yes, given  
 No

Give first dose of inj. magnesium sulfate and refer immediately to FRU/Higher center OR give full dose (loading and then maintenance) if at FRU if:

Mother has systolic BP  $\geq 160$  or diastolic  $\geq 110$  with  $\geq 3+3$  proteinuria **OR** BP systolic  $\geq 140$  or diastolic  $\geq 90$  with proteinuria trace to  $+2$  along with any of:

- Presence of any symptom like:
- Severe headache
  - Pain in upper abdomen
  - Blurring of vision
  - Oligouria (passing  $<400$  ml urine in 24 hrs)
  - Difficulty in breathing
- Convulsions

- Skilled assistant identified and ready to help at birth if needed

### Confirm essential supplies are at bedside/labour room:

*For Mother*

- Gloves  
 Soap and clean water  
 Oxytocin 10 units in syringe  
 Pads for mother

Prepare to care for mother immediately after birth of baby (AMTSL)\*

- Confirm single baby only (rule out multiple babies)
- Give inj. oxytocin 10 units IM within 1 minute
- Do controlled cord traction to deliver placenta
- Massage uterus after placenta is delivered, check for completeness (all Cotyledons and Membranes)

*For Baby*

- Two clean dry, warm towels  
 Sterile scissors/blade to cut cord  
 Mucus extractor  
 Cord ligature  
 Bag-and-mask

Prepare to care for baby immediately after birth

- Dry baby, wrap, and keep warm, give Vit. K, start breastfeeding
- If not breathing: clear airway and stimulate
- If still not breathing:
  - Cut cord
  - Ventilate with bag-and-mask
  - Call for help (Pediatrician/SNCU/NBSU/F-IMNCI trained doctor if available)

Name of Provider: .....Date: ..... Signature: .....

# After Birth : SAFE CHILDBIRTH CHECKLIST

## CHECK-3 Soon After Birth (within 1 hour)

### Is Mother bleeding abnormally?

- Yes, shout for help, refer if needed or treat if facilities available
- No

If bleeding  $\geq$ 500 ml, or 1 pad soaked in  $<$ 5 min:

- Call for help, massage uterus, start oxygen, start IV fluids, start oxytocin drip 20 units in 500 ml of RL@40-60 drops/min, treat cause
- If placenta not delivered or completely retained: give IM or IV Oxytocin, stabilize, and refer to FRU/Higher centre
- If placenta is incomplete: remove if any visible pieces, and refer immediately to FRU/ higher centre

### Does Mother need:

#### • Antibiotics?

- Yes, given
- No

Give antibiotics to mother if manual removal of placenta is performed, or if mother's temperature  $\geq$ 38°C ( $\geq$ 100.5°F) and any of:

- Chills
- Foul-smelling vaginal discharge
- Lower abdominal tenderness
- Rupture of membranes  $>$ 18 hrs during labour
- Labour was  $>$ 24 hours

#### • Inj. Magnesium sulfate?

- Yes, given
- No

Give first dose of inj. magnesium sulfate and refer immediately to FRU/Higher center OR give full dose (loading and then maintenance) if at FRU if: Mother has systolic BP  $\geq$ 160 or diastolic  $\geq$ 110 with  $\geq$ +3 proteinuria OR BP systolic  $\geq$ 140 or diastolic  $\geq$ 90 with proteinuria trace to +2 along with any of:

- Presence of any symptom like:
  - Severe headache
  - Pain in upper abdomen
  - Blurring of vision
  - Oligouria (passing  $<$ 400 ml urine in 24 hrs)
  - Difficulty in breathing
- Convulsions

### Does Baby need:

#### • Antibiotics?

- Yes, given
- No

Give baby antibiotics if antibiotics were given to mother, or if baby has any of:

- Breathing too fast ( $>$ 60/min) or too slow ( $<$ 30/min)
- Chest in-drawing, grunting
- Convulsions
- Looks sick (lethargic or irritable)
- Too cold (baby's temp  $<$ 36°C and not rising after warming)
- Too hot (baby's temp  $>$ 38°C)
- Excessive crying

#### • Referral?

- Yes, organized
- No

Refer baby to NBSU/SNCU/FRU/higher centre if:

- Any of the above (antibiotics indications)
- Baby looks yellow, pale or bluish

#### • Special care and monitoring?

- Yes, organized
- No

Arrange special care/monitoring for baby if any of the following is present:

- Preterm baby
- Birth weight  $<$ 2500 gms
- Needs antibiotics
- Required resuscitation

#### • Syrup Nevirapine

- Yes, given and will continue upto 6 weeks
- No

Give if mother is HIV+:

- If mother has received  $>$ 24 weeks of ART, give syrup Nevirapine to baby for 6 weeks
- If mother has received  $<$ 24 weeks of ART or mother is not on ART, give syrup Nevirapine to baby for 12 weeks

- Started breastfeeding. Explain that colostrum feeding is important for baby.**
- Started skin-to-skin contact (if mother and baby well) and KMC in pre-term and low-birth weight babies.**
- Explain the danger signs and confirm mother/companion will call for help if danger signs present.**

Name of Provider: .....Date: ..... Signature: .....

# After Birth : SAFE CHILDBIRTH CHECKLIST

## CHECK-4 Before Discharge

### Is Mother's bleeding controlled?

- Yes
- No, treat, observe and refer to FRU/ higher centre if needed

### Does mother need antibiotics?

- Yes, give and delay discharge
- No

Give antibiotics to mother if mother has temperature  $\geq 38^{\circ}\text{C}$  or  $\geq 100.5^{\circ}\text{F}$  with any of:

- Chills
- Foul-smelling vaginal discharge
- Lower abdominal tenderness

### Does baby need antibiotics?

- Yes, give, delay discharge and refer to FRU/ higher centre
- No

Give baby antibiotics if baby has any of:

- Breathing too fast ( $>60/\text{min}$ ) or too slow ( $<30/\text{min}$ )
- Chest in-drawing, grunting
- Convulsions
- Looks sick (lethargic or irritable)
- Too cold (baby's temp  $<36^{\circ}\text{C}$  and not rising after warming)
- Too hot (baby's temp  $>38^{\circ}\text{C}$ )
- Stopped breastfeeding
- Umbilical redness extending to skin or draining pus

### Is baby feeding well?

- Yes, encourage mother for exclusive breastfeeding for 6 months.
- No, help mother, delay discharge; refer to NBSU/ SNCU/ Higher centre if needed

- Discuss and offer family planning options to mother
- Confirm post delivery stay at facility for 48 hours in normal delivery and 7 days in C-section cases
- Explain the danger signs and confirm mother/companion will seek help/ come back if danger signs are present after discharge
- Arrange transport to home and follow-up for mother and baby

Thank mother for availing services from you

## Danger Signs

### Mother has any of:

- Excessive bleeding
- Severe abdominal pain
- Severe headache or visual disturbance
- Breathing difficulty
- Fever or chills
- Difficulty emptying bladder
- Foul smelling vaginal discharge

### Baby has any of:

- Fast/difficulty breathing
- Fever
- Unusually cold
- Stops feeding well
- Less activity than normal
- Whole body becomes yellow

**Notes on Discharge/ Referral/ Death**

## Safe Surgery & Safe Anesthesia

### Operating Room (OR)

The operating theatre is a room specifically for use by the anesthesia and surgical teams and must not be used for other purposes.

#### An OR requires the following:

- Good lighting and ventilation
- Dedicated equipment for procedures
- Equipment to monitor patients, as required for the procedure
- Drugs and other consumables for routine and emergency use

#### Ensure that procedures are established for the correct use of the O.R. and all staff is trained to follow them:

- Keep all doors to the O.R. closed, except those required for the passage of equipment, personnel and the patient
- Store some sutures and extra equipment in the O.R. to decrease the need for people to enter and leave the O.R. during a case
- Keep to a minimum the number of people allowed to enter the O.R., especially after an operation has started
- Keep the O.R. uncluttered and easy to clean
- Between cases, clean and disinfect the table and instrument surfaces
- At the end of each day, clean the O.R.: start at the top and continue to the floor, including all furniture, overhead equipment and lights. Use a liquid disinfectant at a dilution recommended by the manufacturer
- Sterilize all surgical instruments and supplies after use and store them somewhere protected and ready for the next use

## **Sponge And Instrument Counts**

It is essential to keep track of the materials being used in the O.R. in order to avoid inadvertent disposal, or the potentially disastrous loss of sponges and instruments in the wound.

It is standard practice to count supplies (instruments, needles and sponges):

- Before beginning a case
- Before final closure
- On completing the procedure

The aim is to ensure that materials are not left behind or lost. Pay special attention to small items and sponges.

Create and make copies of a standard list of equipment for use as a checklist to check equipment as it is set up for the case and then as counts are completed during the case.

Include space for suture material and other consumables added during the case.

When trays are created with the instruments for a specific case, such as a Caesarean section, also make a checklist of the instruments included in that tray for future reference.

Leave the O.R. ready for use in case of emergency

## **Operative Procedure List**

An operative procedure list is needed whenever the surgical team will perform several operations in succession. The list is a planned ordering of the cases on a given day.

Elements such as urgency, the age of the patient, diabetes, infection and the length of the procedure should all be considered when drawing up the list.

Operate on “clean” cases before infected cases since the potential for wound infection increases as the list proceeds.

Also consider other factors when making up the operative list: children and diabetic patients should be operated on early in the day to avoid being subjected to prolonged periods without food.

Ensure that between operations:

- Operating theatre is cleaned
- Instruments are re-sterilized
- Fresh linen is provided

It is essential to have clear standard procedures for cleaning and the storage of operating room equipment; these must be followed by all staff at all times.

The probability of wound infection increases in proportion to the number of breaches of aseptic technique and the length of the procedure.

*Adapted from "WHO Safe Surgery & Safe Anesthesia"*

## Postoperative Care

If the patient is restless, something is wrong

**Look for the following in the Recovery Room:**

---

- Airway obstruction
- Hypoxia
- Hemorrhage: internal or external
- Hypotension and/or hypertension
- Postoperative pain
- Hypothermia, shivering
- Vomiting, aspiration
- Residual narcosis
- Falling on the floor

**The recovering patient is fit for the ward when he or she is:**

---

- Awake, opens eyes
- Extubated
- Breathing spontaneously, quietly and comfortably
- Can lift head on command
- Not hypoxic
- Blood pressure and pulse rate are satisfactory
- Appropriate analgesia has been prescribed and is safely established

# SURGICAL SAFETY CHECKLIST (FIRST EDITION)
